Digital Temperature/ RH Sensor

Item # 3613THS

Thank you for purchasing a Digital Temperature/RH Sensor. The sensor is compatible with the WatchDog Sensor Pups (Item 3900, 3960, and 3930), the pre-packaged Sensor Pup Stations, and 3000-series WatchDog Weather Stations (3500 models and 3200 models shipped after February 1, 2024). To ensure the sensor outputs accurate meteorological data, the sensor is housed inside a radiation shield.

The sensor can be attached to a pole or post with the included U-Bolt and bracket. The 2.5mm plug connects to any of the Pup's external channels. The Pup must be running firmware version 1.04 or greater. Configure the Pup using SpecConnect web software or the PC-based Retriever and Pup Launch Utility. The 3000-series stations can be configured using SpecConnect web software or with the WatchDog Mobile app.

Note: This sensor will NOT work with the 2000-series WatchDog full stations and mini stations or the 1000-series micro stations.
